EDUCATION

King's College London *June 2026 – Present*
Ph.D. in Computer Science *London, United Kingdom*
Advisors: Stefanos Leonardos, Yali Du
Research: Multi-Agent Reinforcement Learning, Meta-Learning

London School of Economics and Political Science (LSE) *Sep 2022 – July 2023*
MSc Quantitative Methods for Risk Management *London, United Kingdom*

Heriot-Watt University *Sep 2019 – June 2022*
BSc (Hons) Actuarial Science *Edinburgh, United Kingdom*
First Class Honours
Deputy Principal's Award for Academic Excellence (2021/22)

PUBLICATIONS

Discovering Learning Rules that Shape Others *Under review, AAMAS 2027*
Hong Jun Lee*, Ziyan Wang, Jun Wang, Stefanos Leonardos, Yali Du

EXPERIENCE

Tokio Marine Kiln *Feb 2025 – June 2025*
Cyber Data & Catastrophe Analyst *London, United Kingdom*

- Validated portfolio data and forecast cyber-loss trends with Bayesian models and logistic regression, and traced the drivers of shifts in modelled losses, including business-interruption losses.
- Benchmarked vendor cyber-catastrophe models against in-house estimates, using Monte Carlo simulation of heavy-tailed (Poisson–Pareto) losses to compare exceedance-probability curves.
- Led the upgrade of the core catastrophe-modelling platform, coordinating IT and InfoSec.

Deloitte UK *Sep 2023 – Nov 2024*
Actuarial Analyst *London, United Kingdom*

- Built a Python (PyQt) tool for running economic scenario generators (interest rates, yield curves, implied volatility), and cut its runtime by 30% by vectorising the Monte Carlo loops in NumPy.
- Modelled yield-curve dynamics with principal component analysis (level, slope, curvature) and interest-rate volatility surfaces with the SABR stochastic-volatility model.
- Ran economic-capital simulations (99.5% one-year VaR) to quantify the capital impact of methodology changes, and calibrated proxy capital models with simulated annealing and SGD.

London School of Economics and Political Science (LSE) *Mar 2023 – July 2023*
Research Assistant *London, United Kingdom*

- Studied major investment banks' risk management through the 2008 crisis, forecasting volatility and correlation with GARCH and DCC models and backtesting Value-at-Risk.
- Contributed to the syllabus of a summer course on Quantitative Methods for Finance and Risk Analysis, covering copulas, time-series models and stress testing.

TEACHING

King's College London *Oct 2026 – Present*
Teaching Assistant *London, United Kingdom*

6CCSARDM	Agent Reasoning and Decision Making
7CCSMQMF	Quantitative Methods in Finance
7CCSMSCF	Scientific Computing for Finance

SKILLS & INTERESTS

Programming: Python, SQL
Languages: English, Mandarin, Malay, Japanese, Korean, Cantonese
Interests: Chess, Poker, Reading
