EDUCATION

King's College London
Ph.D. in Computer Science

June 2026 - Present
London, United Kingdom

Advisors: Stefanos Leonardos, Yali Du

London School of Economics and Political Science (LSE)
MSc Quantitative Methods in Risk Management

Sep 2022 - July 2023
London, United Kingdom

Heriot-Watt University
BSc (Hons) Actuarial Science

Sep 2019 - June 2022
Edinburgh, United Kingdom

- Deputy Principal's Award Winner for Academic Excellence 2021/22
- Obtained 1st Class Honours

CAREER EXPERIENCE

Tokio Marine Kiln
Cyber Data & Catastrophe Analyst

Feb 2025 - June 2025
London, United Kingdom

- Ensure data accuracy and forecast trends by validating data with different mathematical and statistical techniques, such as Bayesian inference or logistic regression. Conducted in-depth analysis of cyber insurance portfolios, identifying and investigating drivers for fluctuations in key metrics such as ground-up loss, business interruption loss, etc.
- Collaborate closely with leading model vendors, utilising Monte Carlo simulations and diverse statistical distributions to evaluate external models against in-house capabilities and enhance risk assessment accuracy.
- Lead a strategic project for upgrading core catastrophe modelling systems to a newer version, coordinating with IT, InfoSec, and other stakeholders on infrastructure decisions including cloud vs. on-premise server deployment and SQL database configuration.

Deloitte UK
Actuarial Analyst

Sep 2023 - Nov 2024
London, United Kingdom

- Engineered a Python interface application using PyQt, specializing in economic scenario generators for financial modelling. Achieved a 30% runtime reduction via algorithm optimization, simulating interest rates, yield curves, implied volatility, etc.
- Produced risk scenario simulations for a wide variety of business uses including impact analysis for risk methodology changes, economic capital calculations and lite model calibrations using techniques such as simulated annealing or stochastic gradient descent.
- Modelled interest rates using stochastic volatility models and principal components analysis to capture movements across the term structure.

London School of Economics and Political Science (LSE)
Research Assistant

Mar 2023 - July 2023
London, United Kingdom

- Collaboratively designed a comprehensive course for LSE alongside Professor Jon Danielsson regarding Quantitative Methods for Finance and Risk Analysis by modifying and reviewing syllabus such as copulas, time series, stress testing etc.
- Conducted an in-depth analysis of the risk management practices of major investment banks during the 2008 Financial Crisis, using time-series models such as GARCH and DCC for volatility and correlation forecasting.

Thinkat Advisory
Corporate Finance Advisor Internship

June 2021 - Aug 2021
Kuala Lumpur, Malaysia

- Analysed correlation-based forecasting models to benchmark 20+ companies' financial performances in the ACE and LEAP markets to understand past revenue growth and to model projections.
- Represented Alpha Ocean Resources Bhd, one of South-East Asia's leading tuna fishing company valued at USD 1.57m, evaluating its balance sheet, P&L and cashflow statement prepare an investors insight report.

Baker Tilly
Corporate Restructuring & Recovery Internship

June 2020 - Aug 2020
Kuala Lumpur, Malaysia

- Evaluated risk data for Baker Tilly's debtors by eliciting assets, inventory held values and available fiscal statements.
- Garnered feedbacks and ideas from discussions with stakeholders to develop a debt recovery plan with a risk advisory to regain approximately USD 1.03m of outstanding debt.
- Conducted due diligence reviews on asset freezing and financial background risk reviews to report on potential compliance breaches and quality improvements to standard operating procedures.
